

MAKERS 312

CREATE

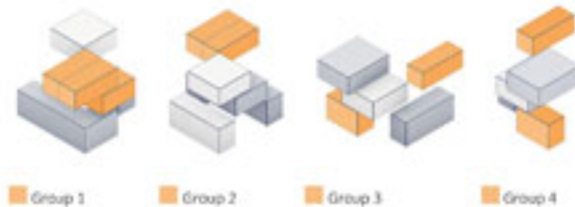

Makers 312 is a public indoor space project located within the Zafer Bazaar in Ankara's Zafer Square, aiming to bring a fresh perspective to urban life. Inspired by maker culture, the project spatially reflects a lifestyle centered on production, sharing, and creativity. It creates a multi-layered public experience by offering workshops, co-working spaces, cafes, and accommodation units for students, producers, citizens, and various social stakeholders.

Makers 312 opposes the traditional architectural approach that has alienated buildings from the urban fabric over the years, proposing an open and permeable spatial arrangement. This allows for a fluid transition between Bayındır Street and Zafer Square.

Conceptual Diagram

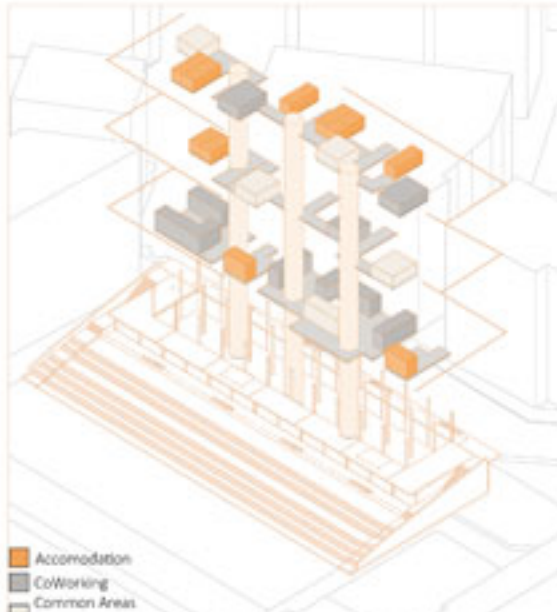

Building Blocks

When creating our blocks, we started with a rectangular block. In some cases, these blocks cover vertically, in some cases, they come together in an angle and sometimes they are used alone. While creating our spaces, we added that block system and these block systems were created by rotating. All blocks and block groups are different derivations of each other.

Mass Diagram

Diagram, which is shown, moving our functions and circulation lines in the area we designed. The circulation line is provided by circular stairs, escalators and corridors.

Hotel Room

All rooms for one person and they will enter with QR code on their smartphones.

Working Area

In the second floor visitors will work together. They can discuss their projects and/or ideas that they want to create.

Common Space

In the second floor visitors will spend their time together. Our purpose for this area is bringing together people with common interests.

FeedWell Cafe

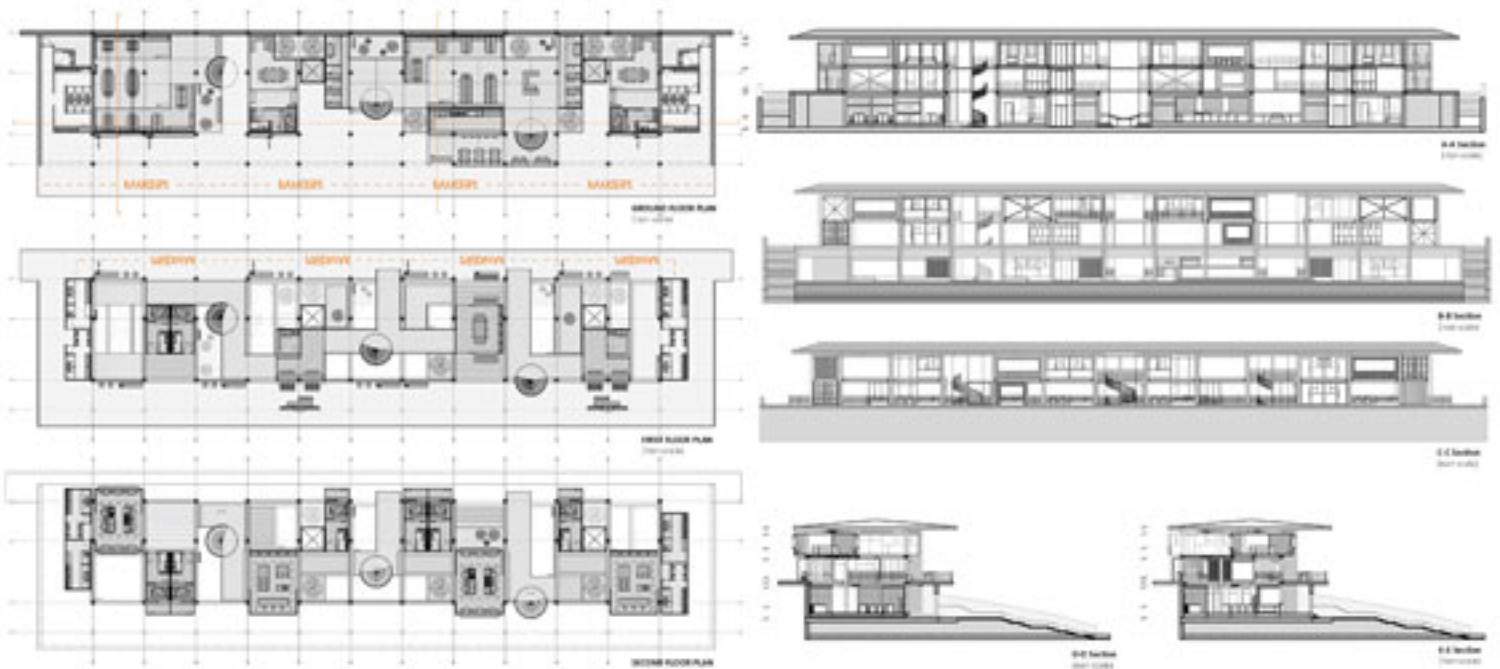

The table area on the ground floor is designed for the visitors and focus of people who are also spending time, which is a meeting area on urban scale that meets the cafe area.

Workshop Area

Workshops on the ground floor offer areas where people who have more or less skills such as wooden processing and craftsman can work together.
